NEWS RELEASE

More Network Solutions from Artistic Licence!

Following in the footsteps of Down-Lynx, the PLASA 2001 award winning Ethernet / DMX converter, Artistic Licence has further extended the product range.

Net-Lynx is a portable Ethernet / DMX converter, housed in a robust aluminium case.

The product is available in two versions: Net-Lynx O/P converts Art-Net Ethernet into two universes of DMX512A. Net-Lynx I/P provides the complementary function, converting two universes of DMX into Art-Net Ethernet.

Net-Lynx uses the new Neutrik Ethercon connector, providing a robust and latching network connection. The product can be powered via the Ethernet connection or an external low voltage power supply.

Net-Lynx is aimed at two key markets. In the first instance it provides a portable converter that can be used as an output expander for the growing range of lighting desks that support Art-Net. Net-Lynx is also a useful option for installation projects. It allows an installation to use wall mounted Down-Lynx panels in key areas where DMX will be required on a daily basis. In secondary areas, the client can now opt to install simple wall mounted Ethernet connectors. When DMX is required, a Net-Lynx is simply plugged into the wall. This option can significantly reduce installation costs.

A truss-mounting adapter will be available soon.
