NEWS RELEASE

Artistic Licence launch Micro-Scope 3a

Micro-Scope has won international product awards and according the ESTA market research, is now the number one best selling DMX512 tester. With results like that, you may wonder why Artistic Licence has launched a new improved version!

Micro-Scope 3a is now shipping. It provides a host of new features, many aimed at the forthcoming DMX512-A standard. Terms such as Text Packet, System Information Packet, Alternate Start Code and Network Test will be added to the lighting technician's dictionary when the new standard is launched. Micro-Scope 3a supports them all!

Micro-Scope 3a also provides a range of new features derived from customer feedback. A complete show patch can be downloaded from the new version of Mic-Edit. This allows Micro-Scope 3a to identify each and every channel by both lamp and function.

The new version of Mic-Edit also provides a range of new features including the ability to output DMX via Micro-Scope 3a. This feature alone will greatly speed the task of entering lamp personalities and test patterns. Mic-Edit also features an on-line update facility, allowing automatic download of lamp personalities from the Artistic Licence Web Server.

Perhaps best of all is the fact that we have held the price at £380, which is around \$535 or €615.

As for the thousands of Micro-Scopes already out there - yes you can upgrade!
