Pixi-Stream Launch

Artistic Licence serves the media!

Pixi-Stream is a media server with a difference. It outputs Art-Net ethernet directly rather than video. This saves an additional conversion process when driving high density LED arrays such as the Artistic Licence Pixi-Web.

Pixi-Stream is supplied as a module for the Artistic Licence MOAP product which is also to be launched at PLASA 2006. This allows MOAP to be simply integrated with other control and distribution modules such as DMX512 conversion.

The product accepts PAL, NTSC, SECAM and S-Video input directly. Additional video inputs or digital video sources can be added with expansion modules. Pixi-Stream supports up to four real time video sources.

Pixi-Stream is configured via a sophisticated graphical user interface. The front panel provides ports for connection of monitor, mouse and keyboard for the configuration phase. Configuration is very fast via 'wizard' style interfaces. Libraries for well known composite LED products are included. RDM (Remote Device Programming) is supported which offers extremely fast patching. An example being approximately three minutes to patch a 1600 pixel wall of Hi-Res Pixi-Web.

Once configuration is complete, all features are controlled from an external lighting board. Connection is via Art-Net ethernet as standard, DMX512 control can be implemented with an additional module. Pixi-Stream is controlled in the same manner as a sophisticated moving lamp. A total of 8 layers are supported, outputting to 20,000 channels of control.

The content of each layer, the digital effects and the layer to layer mixing are all controlled in real time from the lighting board. Each layer can process live video, graphics or animation files. Digital effects can be applied to each layer independently. There is a large library of effects that include Pan, Tilt, Magnify, Stretch, Rotate in any 3D plane, Colour replacement and Cyclic Hue Adjustment.

Additional details are available from the Artistic Licence web site.

About Artistic Licence:

Since 1988, Artistic Licence has specialised in the design, development and manufacture of products for the architectural lighting and entertainment technology industry. The product range encompasses DMX512-A, RDM, Ethernet, Art-Net and MIDI. The range extends from test equipment to data distribution and motion control to LED lighting.

This vast range of products has evolved from years of experience in solving technical problems. At Artistic Licence, no job is too large or too small and no technology is too old, new or complex.

The Artistic Licence Special Projects department provides a unique service by offering the entire product range as building blocks for custom development. Why reinvent the wheel when you can turn to Artistic Licence!

The product line is available throughout the world via a growing number of progressive dealers, a list of which is available from our web site:

www.ArtisticLicence.com

Visitors to our website can also order on-line and download technical data and user guides.

Ends.
